REST API

The Fakturia API is an OpenAPI based interface using the *REST* standard.

It allows developers to directly interact with our application via HTTPS exchanging data in the *JSON* format.

Endpoint for all API calls:

	Production	Sandbox
Endpoint	**https://api.fakturia.de/api/v1/**	https://api.sandbox.fakturia.de/api/v1/
API-Reference	**https://api.fakturia.de/documentation/**	https://api.sandbox.fakturia.de/documentation/
Swagger File	https://api.fakturia.de/api/openapi.json	https://api.sandbox.fakturia.de/api/openapi.json

Timestamps are handled in ISO 8601 format (*yyyy-MM-dd'T'HH:mm:ss* in Java)

- Prerequisites
- Authorization

Prerequisites

The API can only be accessed if the following conditions are true:

- Your Fakturia plan includes API access
- The API is activated in the backend for at least one project
- An API-Key has been generated in the backend
- The IP address of your client has been added to the IP whitelist for the project

Authorization

Include the following HTTP headers in every request to authorize against our service:

Header variable name	value
api-key	{your api key - see project settings in the backoffice}
